

Understanding HTTP Caching

<https://campus.barracuda.com/doc/12194920/>

Use the **WEBSITES > HTTP Caching** page to edit caching parameters for a Service or Rule:

From this page you can set the following parameters:

- Enable/disable caching for the Service or Rule
- Specify response file extensions that can be cached
- Specify maximum and minimum object size for caching
- Specify whether to ignore request headers, response headers, and negative responses
- Enter the default cached object expiration age

For more information on editing caching parameters for a Layer 7 HTTP or HTTPS Service or Rule, log into the Barracuda Load Balancer web interface, go to the **WEBSITES > HTTP Caching** page, click the **Edit** icon next to the Service or Rule you wish to change, and then click the **Help** button.
