

## How to Configure WAN Optimization Policies

<https://campus.barracuda.com/doc/17387/>

WAN Compression works best when applied to homogeneous network traffic. You can create WAN Optimization policies that include entries to specify network traffic that should be compressed. For each entry, you can either select an algorithm to compress the traffic or specify that the traffic should not be compressed. In the Barracuda CloudGen Firewall, a default policy is included. The default policy contains a range of services that includes entries for the most common network traffic. You can use this policy or create and configure a new policy.

### Create a WAN Optimization Policy

1. Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > VPN-Service > Site to Site**.
2. Click the **WANOpt Policies** tab.
3. Click **Lock**.
4. Right-click the table and select **New Policy**.
5. In the **New Policy Rule Name** field, enter a name for the policy.
6. Click **OK**.
7. Click **Send Changes** and **Activate**.

### Create a WAN Optimization Policy Entry

1. Go to **CONFIGURATION > Configuration Tree > Box > Assigned Services > VPN-Service > Site to Site**.
2. Click the **WANOpt Policies** tab.
3. Click **Lock**.
4. Specify the network traffic for this entry. Right-click the policy and select one of the following options:

| Option                        | Description  |
|-------------------------------|--|
| <b>New Generic Rule Entry</b> | Use this entry for network traffic that is not covered by one of the default entries.  |
| <b>New FTP Rule Entry</b>     | Use this entry to classify FTP network traffic for compression.  |
| <b>New SMB Rule Entry</b>     | Use this entry to cover SMB2 or CIFS traffic for compression. Note that optimization of SMB1 and signed SMB2 traffic is not supported. (In the second case, you must adjust the domain policy of the Windows Server to disable SMB signing.) |

5. In the rule entry configuration window, you can specify the following settings:

| Setting | Description |
|---------|-------------|
|---------|-------------|

|                            |   |
|----------------------------|---|
| <b>Type</b>                | This read-only field displays the type of WAN compression entry.  |
| <b>Policy</b>              | The optimization policy that specifies how the network traffic is compressed. You can select one of the following options: <ul style="list-style-type: none"> <li>◦ <b>Deduplication+Compression</b></li> <li>◦ <b>Deduplication</b></li> <li>◦ <b>Compression</b></li> <li>◦ <b>No-WANopt</b></li> </ul> |
| <b>Port List</b>           | The ports for the network traffic to be optimized. You can enter a space-, comma-, or semicolon-delimited list of ports. Port ranges are allowed. For example, you can enter: 80, 1024-1050   |
| <b>Source Network</b>      | The source network.   |
| <b>Destination Network</b> | The target network address of traffic to be compressed. If no destination network is assigned, traffic is optimized according to the defined Port List.   |
| <b>Comment</b>             | Field for optional comments. You can enter a maximum of 1024 characters for your comments.  |

6. Click **OK**.
7. Click **Send Changes** and **Activate**.
