
TCP Proxy, Secure TCP Proxy, and UDP Proxy

<https://campus.barracuda.com/doc/18874397/>

You can create a TCP Proxy Service, a Secure TCP Proxy Service or a UDP Proxy Service to make the Barracuda Load Balancer ADC act as a full TCP or UDP proxy. Using these Service types allows the Real Servers to be located anywhere, as long as they are reachable by the Barracuda Load Balancer ADC. See [Deployment](#) for examples of deployments using TCP and UDP Proxy Services. A Secure TCP Proxy Service provides [SSL Offloading](#).
