

How to Remotely Administer Real Servers

<https://campus.barracuda.com/doc/18874428/>

You can remotely administer Real Servers that are located behind the Barracuda Load Balancer ADC by completing the following steps:

1. For each Real Server, create a Service on the **Basic > Services** page.
2. Configure just one Real Server for this service (the one you want to administer remotely).
3. Use the Virtual IP address for the Service whenever you need to use Secure Shell (SSH) to access the Real Server or perform Remote Desktop Protocol (RDP) administration on the Real Server
