

How to View System Tasks

<https://campus.barracuda.com/doc/18874450/>

The **ADVANCED > Task Manager** page provides a list of tasks that are in the process of being performed and also displays any errors encountered when performing these tasks.

The **Running Tasks** section lists the tasks that are being performed. Some of the tasks that the Barracuda Load Balancer ADC tracks include:

- Linked management setup
- Cluster setup
- Configuration restoration
- Report generation
 - Reports currently being generated
 - Reports queued for email

If pending reports are consuming too many system resources or are no longer needed, you can cancel these reports from this page.

- Importing data

If a task takes a long time to complete, you can click the **Cancel** link next to the task name and then run the task at a later time when the system is less busy.

The **Task Errors** section lists any errors encountered when performing system tasks. The errors are not phased out over time. An error remains in the list until you explicitly remove it.
