How to Back Up and Restore Your System Configuration

https://campus.barracuda.com/doc/19333771/

On the **ADVANCED > Backups** page, you can back up and restore the configuration of the Barracuda Load Balancer ADC. It is strongly recommended that you regularly back up your appliance in case you must restore this information on a replacement Barracuda Load Balancer ADC or in the event that your current system data becomes corrupt.

If you are restoring a backup file on a new Barracuda Load Balancer ADC that is not configured, you must assign your new system an IP address and DNS information on the **BASIC > IP Configuration** page.

Do not edit backup files. Instead, use the web interface to configure your Barracuda Load Balancer ADC. The configuration backup file contains a checksum that prevents the file from being uploaded to the system if any changes are made.

The following information is not included in the backup file:

- System password
- System IP information
- DNS information
