

## Resources

<https://campus.barracuda.com/doc/2458419/>

Within the Barracuda SSL VPN, you can configure different types of internal network corporate resources that your users can access externally such as applications, email, network shares, or intranet websites. Within a resource, you can apply the policies that you have created. When users log into the Barracuda SSL VPN, their **RESOURCES** tab only lists the items to which they have been granted access by the system administrator.

For more information on the types of resources that you can configure on your Barracuda SSL VPN, see the articles that are linked in the following table:

Resource Type	Description	Link
<b>Web Forwards</b>	Access to intranet websites and internal web-based applications.	<a href="#">Web Forwards</a>
<b>Applications</b>	Predefined and custom client/server applications within the secured network.	<a href="#">Applications</a>
<b>Network Connector</b>	Full TCP/IP access into the secured network.	<a href="#">Network Connector</a>
<b>Network Places</b>	Network shares on the internal network.	<a href="#">Network Places</a>
<b>SSL Tunnels</b>	Create SSL tunnels to secure unencrypted intranet services.	<a href="#">SSL Tunnels</a>
