Initial Configuration

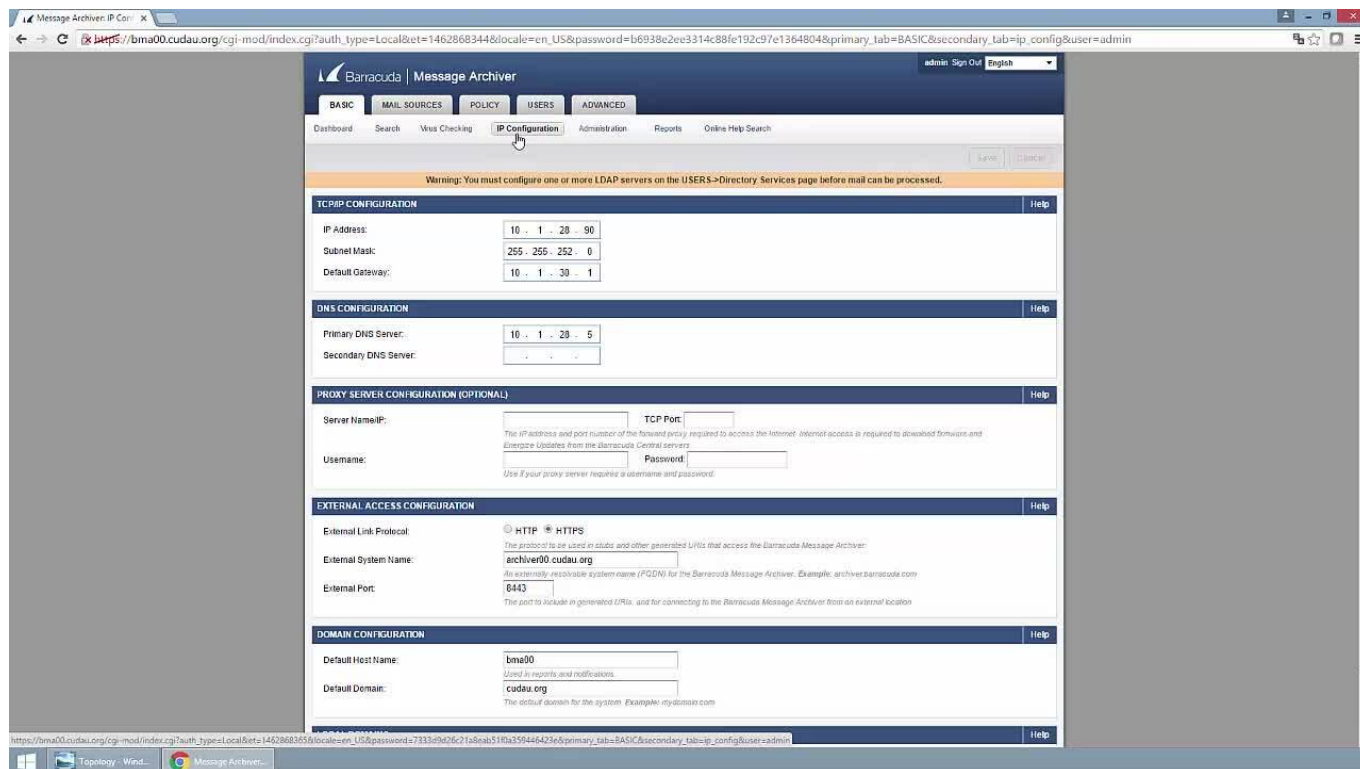

Watch this video for a look at configuring the system:

The screenshot shows the Barracuda Message Archiver web interface. The browser address bar displays a URL with authentication parameters. The interface has a top navigation bar with tabs: BASIC, MAIL SOURCES, POLICY, USERS, and ADVANCED. Below this is a sub-navigation bar with links: Dashboard, Search, Miss Checking, IP Configuration (highlighted), Administration, Reports, and Online Help Search. A warning message states: "Warning: You must configure one or more LDAP servers on the USERS->Directory Services page before mail can be processed." The main configuration area is divided into several sections:

- TCP/IP CONFIGURATION:** Includes fields for IP Address (10.1.28.90), Subnet Mask (255.255.252.0), and Default Gateway (10.1.30.1).
- DNS CONFIGURATION:** Includes fields for Primary DNS Server (10.1.28.5) and Secondary DNS Server.
- PROXY SERVER CONFIGURATION (OPTIONAL):** Includes fields for Server Name/IP, TCP Port, Username, and Password. A note indicates that proxy server configuration is required for downloading firmware and emergency updates.
- EXTERNAL ACCESS CONFIGURATION:** Includes fields for External Link Protocol (selected as HTTPS), External System Name (archiver00.cudau.org), and External Port (8443). A note explains that these are used in generated URLs.
- DOMAIN CONFIGURATION:** Includes fields for Default Host Name (bma00) and Default Domain (cudau.org). A note explains that the default domain is used in reports and notifications.

The bottom of the page shows a Windows taskbar with icons for Topology, Wind..., and Message Archiver.
