

# How to Configure Log Streaming to Microsoft Azure Log Analytics Workspace

<https://campus.barracuda.com/doc/26679/>

To stream log data to a Log Analytics workspace in Microsoft Azure, you must connect your Barracuda SecureEdge with the Log Analytics workspace. For more information on Microsoft Azure Log Analytics workspaces, see <https://docs.microsoft.com/en-us/azure/azure-monitor/log-query/get-started-portal>.

## Step 1. Create Log Analytics Workspace

1. Log into the Azure portal: <https://portal.azure.com>
2. In the left menu, click **All services** and go to **Log Analytics workspaces**.

3. In the **Log Analytics workspaces** menu, click **Create**.

4. The **Create Log Analytics workspace** blade opens. In the **Basics** blade, enter values for the following:
  - **Subscription** – Select your subscription.
  - **Resource Group** – Select an existing resource group, or create a new, dedicated resource group for your workspace.
  - **Name** – Enter a name for the Log Analytics workspace.
  - **Region** – Select the geographical location where the data for your workspace will be

stored.

## Create Log Analytics workspace ...

**Basics** Tags Review + Create

**i** A Log Analytics workspace is the basic management unit of Azure Monitor Logs. There are specific considerations you should take when creating a new Log Analytics workspace. [Learn more](#)

With Azure Monitor Logs you can easily store, retain, and query data collected from your monitored resources in Azure and other environments for valuable insights. A Log Analytics workspace is the logical storage unit where your log data is collected and stored.

### Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

### Basics

Subscription	NetSec-cust2
Resource group	Campus-LogAnalytic
Name	Campus-LogAnalytic-workspace
Region	West Europe

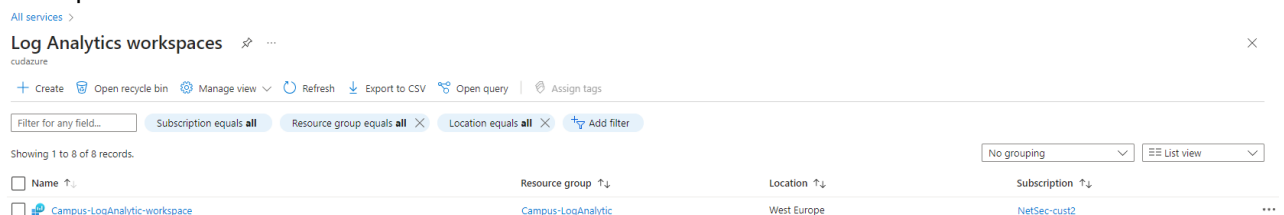

### Pricing

Pricing tier	Pay-as-you-go (Per GB 2018)
--------------	-----------------------------

The cost of your workspace depends on the volume of data ingested and how long it is retained. Regional pricing details are available on the [Azure Monitor pricing page](#). You can change to a different pricing tier after the workspace is created. [Learn more](#) about Log Analytics pricing models.

## Step 2. Retrieve Workspace ID and Workspace Key

To connect Barracuda SecureEdge with the newly created Log Analytics workspace, you need the **Workspace ID** and **Workspace Key**.

1. Log into the Azure portal: <https://portal.azure.com>
2. In the left menu, click **All services** and go to **Log Analytics workspaces**.
3. Click on the Log Analytics workspace created in Step 1.
4. In the left menu, click **Agents**.

All services > Log Analytics workspaces > Campus-LogAnalytic-workspace

## Step 3. Connect Barracuda SecureEdge with Microsoft Azure Log Analytics Workspace

1. Log into Barracuda SecureEdge: <https://se.barracudanetworks.com/>
2. Go to **Integration > Azure Monitor**.

3. The **Azure Monitor** page opens, specify values for the following:
  - **Azure Log Analytics (OMS)** - Set the switch to **Enable**.
  - **Workspace ID** - Enter the **WORKSPACE ID** retrieved in Step 2.
  - **Workspace Key** - Enter the **PRIMARY KEY** retrieved in Step 2.

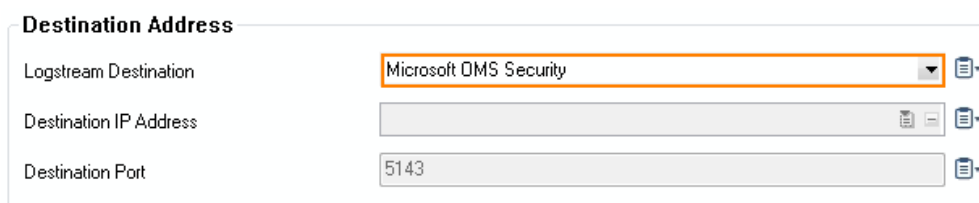

4. Click **Save**.

## Additional Information

### (Optional) Configure Azure Log Analytics as the Logstream Destination on the CloudGen Firewall

If you want to configure the CloudGen Firewall to send the logstream to Microsoft Azure Log Analytics, select **Microsoft OMS Security** from the **Logstream Destination** list. For more information, see [How to Configure Log Streaming to Microsoft Azure Log Analytics](#).

To stream logs to Microsoft Azure Log Analytics using the CEF format, you must configure **Microsoft OMS Security** as the streaming destination.

---

Data sent to Log Analytics will show up under the **Syslog** tag in Azure Log Analytics. Data sent to **Microsoft OMS Security** can be found under **CommonSecurityLog**, which requires **Security and Audit** to be enabled in the workspace (select **Configure monitoring solutions** and search for the solution).
