

How to Resolve "Error backing up selected object" Error

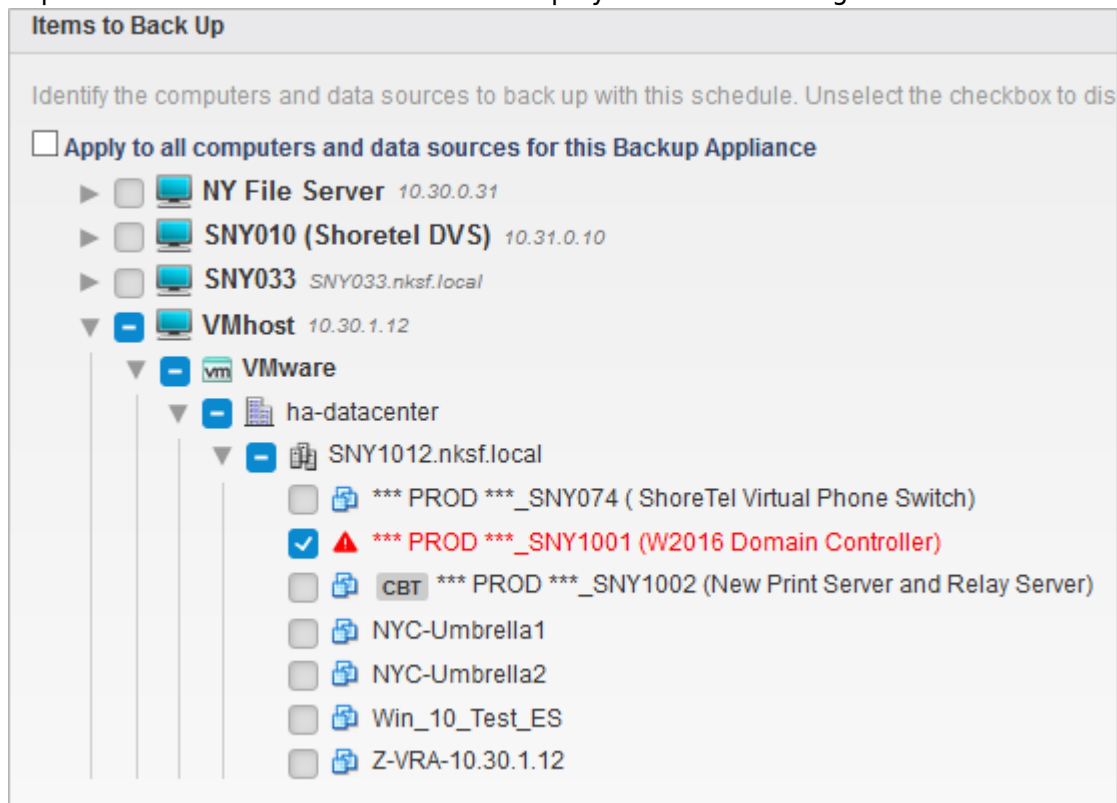

<https://campus.barracuda.com/doc/27131976/>

Through the Barracuda Backup web interface you can select specific folders for back up within a parent directory. However, if a folder that has been selected for backup is moved or removed from the parent directory, the Barracuda Backup appliance generates an error because the item selected for back up is no longer present:

To resolve this error, log into the web interface and deselect the folder which has been removed from the directory for the source. To do so,

1. Log into Barracuda Backup, and go to the **BACKUP > Schedules** page.
2. Click **Edit** to the right of the source to edit schedule.
3. Expand the item selection. The folder displays with a red triangle:

4. Uncheck the removed folder, and click **Save** to save your settings.

Important

Deselecting folders and/or files purges the associated data from the Barracuda Backup appliance.
