

## Reverting to a Previous Snapshot in VMware

<https://campus.barracuda.com/doc/27294/>

You can revert a guest machine to the current snapshot, or to a snapshot that you select. Reverting returns the guest configuration and state to the snapshot you select. Any modifications made to the configuration of the virtual machine since the last snapshot was taken are discarded during the revert process.

1. In Service Center, click **Status > Service Modules**.
2. Click the **VMware** link.
3. In the **Managed Sites** table, click a site name.
4. In the **Managed Hosts** table, click a host machine name.
5. In the **Guests** table, click the name of the virtual machine on which you want to apply a snapshot.
6. Click the **Manage Snapshots** link.
7. Do one of the following:
  - In the **Snapshot Management** area, click **Revert to Current Snapshot**.
  - In the **Available Snapshots** table, click the **Revert** link for the snapshot you want to revert to.
