

Implementing Global Server Load Balancing Regions

<https://campus.barracuda.com/doc/3539029/>

Global Server Load Balancing (GSLB) regions are used only if the Response Policy is Region Only, to direct traffic to data centers with region-specific content. Add a region to a host on the **ADVANCED > GSLB Services** page so that traffic that originates in that region is directed to the Site IP address.

A number of predefined regions are listed on the **ADVANCED > GSLB Settings** page. You can also create a custom region by specifying a region name and then adding one or more regions from a list.
