

How to Automate System Alert and SNMP Trap Delivery

<https://campus.barracuda.com/doc/3539056/>

The **BASIC > Administration** page allows you to configure the Barracuda Load Balancer to automatically email notifications to the addresses you specify. To enter multiple addresses, separate each address with a comma. An email notification is generated if the number of operating Real Servers for a Service falls below a preset threshold.

You can also configure SNMP traps to be generated when certain events occur. Go to the **ADVANCED > SNMP Configuration** page to see the list of possible traps.
