

How to View Logs

<https://campus.barracuda.com/doc/3539057/>

The **BASIC > Event Log** page maintains a list of all noteworthy events that affect the operation of the Barracuda Load Balancer, such as attacks upon various Services and status changes for a Real Server.

You can view the Syslog, which contains administrative updates such as logins and configuration changes as well as all of the system events contained in the Event Log, using the **ADVANCED > Syslog** page. You can also enter an IP address where the syslog output can be directed.

If Intrusion Prevention System is enabled, you can look at messages related to it in the Intrusion Prevention Log on the **BASIC > Intrusion Prevention** page.
