
How to Remotely Administer Real Servers

<https://campus.barracuda.com/doc/3539059/>

To remotely administer Real Servers that are located behind the Barracuda Load Balancer, for each Real Server, create a Service which load balances only that one Real Server. Use the Virtual IP address for that Service whenever you need to use Secure Shell (SSH) to access the Real Server or perform Remote Desktop Protocol (RDP) administration on the Real Server.
