

Deployment in the DMZ

Barracuda Email Security Gateway in the DMZ

The figure below shows the Barracuda Email Security Gateway in front of your corporate firewall in the DMZ. In this example, the Mail Server has an IP address of 64.5.5.6 and the Barracuda Email Security Gateway has an internal IP address of 64.5.5.5.

Figure 1: The Barracuda Email Security Gateway in the DMZ.

In this type of setup, perform the following tasks:

1. Assign an available external IP address to the Barracuda Email Security Gateway.
2. Change the MX (Mail Exchange) records on the DNS (Domain Name Server) to direct traffic to the Barracuda Email Security Gateway. Create an A record and an MX record on your DNS for the Barracuda Email Security Gateway.

The following example shows a DNS entry for a Barracuda Email Security Gateway with a name of *barracuda* and an IP address of 64.5.5.5.

```
barracuda.yourdomain.com IN A 64.5.5.5
```

The following example shows the associated MX record with a priority number of 10:

```
IN MX 10 barracuda.yourdomain.com
```

Continue with [Step 2 - Install the Barracuda Email Security Gateway](#).
