

Restore from Backups

<https://campus.barracuda.com/doc/39813222/>

You can restore the Barracuda SSL VPN from a backup file you previously created. If you did a complete backup or just a backup up of the Appliance or SSL VPN configuration you can do a full or partial restore.

Complete restore for the Barracuda SSL VPN

1. Open the **BASIC > Backups** page.
2. In the **Restore Backups** section, select the **Restore From:** backup file source. Select **smb** to restore from a network share, or local if you have the backup files on you local computer.
3. Click **Browse**.

The screenshot shows the 'Restore Backups' form. At the top, there is a 'Help' button. Below it, a note states: 'Note: Uploaded backups must be confirmed to take effect and will overwrite the current configuration.' The form has two main sections. The first section contains 'Restore From:' with a dropdown menu set to 'SMB' and a 'Browse' button. The second section contains 'Show All Backups:' with radio buttons for 'Yes' and 'No', where 'No' is selected. To the right of these sections, there are two informational boxes: 'Select the destination where the desired backup file is stored.' and 'Include all backups on the server, not limiting to backups saved by this appliance.'

4. Select the backup file and click **Open**.
5. After the upload has completed click **Finsh**.

The screenshot shows a 'Loading in progress' message box. It has a blue header with the text 'Loading in progress'. The main body is light blue and contains the text 'Your backup file has been loaded successfully.' At the bottom, there is a purple 'Finish' button.

6. On the top of the page select the **Components** you want to restore. For a complete restore select **Configuration** and **SSL VPN Configuration/Logs**.
7. Click **Restore Now**.

RESETTING ... Please Wait

Wait while the Barracuda SSL VPN restored the configuration from the selected backup files. You will be redirected to the login screen once the restore process has been completed.
