
Access Rights

<https://campus.barracuda.com/doc/39816038/>

Access rights grant various permissions to configure resources and system settings. As administrator, you can assign access rights to individual users or groups (e.g., all team leaders). You can also use access rights to create administrators for all or just one user database. Access rights are classified as:

- **Resource Rights** – Lets users create, edit, and delete resources such as access rights, profiles, and network places.
- **System Rights** – Lets users create, edit, and delete system resources such as policies, SSL certificates, authentication schemes, account, and reporting.
- **Personal Rights** – Lets users manage personal resources in the Manage Account mode of the SSL VPN web interface.

You can create an access right for a single user database, or you can create an access right that is available to all user databases. You can also copy access rights between user databases.

Create access rights

To create an access right:

1. Log into the [SSL VPN web interface](#).
2. Go to the **Manage System > ACCESS CONTROL > Access Rights** page.
3. In the **Create Access Rights** section, select the user database that you want to create the access right for. For example, if you want to create the access right for all user databases, select **Global View**.
4. Select the **Type** of access right that you are creating.
5. Enter a descriptive **Name** for the access right.
6. From the **Available Rights** list, select the rights that you want to add.
7. From the **Available Policies** list, select the policies that you want to assign the access rights for.
8. Click **Add**.

The new access right appears in the **Access Rights** section.

Edit access rights

To edit an access right, go to the **Manage System > ACCESS CONTROL > Access Rights** page and click **Edit** next to the name of the access right.

To remove an access right, click **Delete** next to the name of the access right.

Copy access rights to a different user database

To copy an access right to a different user database:

1. Log into the [SSL VPN web interface](#).
2. Open the **Manage System > ACCESS CONTROL > Access Rights** page.
3. In the **Access Rights** section, click **More** next to the name of the access right and select **Copy to User Database**.
4. In the **Copy to User Database** section of the **Edit Access Right** window, double-click the user databases that you want to copy the access right to.
5. Click **Save**.
