How to Enable Form Scripting Support

https://campus.barracuda.com/doc/39823542/

This article refers to the Barracuda Message Archiver firmware 5.2 or higher, and Barracuda Archive Search for Outlook version 5.2 or higher. This article refers to Outlook version 2010 only.

Configuration Guidelines
This article is intended as a configuration *guideline*; your deployment will be specific to your environment. Any administrative changes should be reviewed with your IT team before proceeding.

Outlook 2010

By default, in Microsoft Outlook 2010 a security setting does not allow script execution or custom forms in shared mailboxes or public folders. For this reason, if the Microsoft Exchange Administrator performs message stubbing on shared mailboxes or public folders delegated to all users or specific user groups, these stubbed messages cannot be retrieved in Archive Search for Outlook. To allow users to retrieve these stubbed messages in addition to their **Inbox** messages, each user can set **Allow Script in shared folders**, or the Microsoft Exchange Administrator can enable scripts in folders organization-wide using the Microsoft Office policy template (ADM) files.

Enable Scripting Organization-Wide (Recommended)

To enable scripts across your entire organization, see the Microsoft article Office 2010 Administrative Template files (ADM, ADMX/ADML) and Office Customization Tool download, verify your operating system in the section *System requirements*, and follow the steps described in the section *Instructions.*

Once you download and set up the ADM template files, open the associated Outlook ADM file, open the ADM file **outlk14.adm**

In the ADM file, set VALUEON NUMERIC to '1' and VALUEOFF NUMERIC to '0' for the following values:

- VALUENAME SharedFolderScript
- VALUENAME PublicFolderScript

For example:

```
POLICY "Disable scripts for shared folders"

KEYNAME Software\Policies\Microsoft\Office\14.0\Outlook\Security

        Part "Check to disable scripts for shared folders" CHECKBOX

                        VALUENAME SharedFolderScript

                        VALUEON NUMERIC 1 DEFCHECKED

                        VALUEOFF NUMERIC 0

        END PART

        END POLICY

POLICY "Disable scripts for public folders"

KEYNAME Software\Policies\Microsoft\Office\14.0\Outlook\Security

        Part "Check to disable scripts for public folders" CHECKBOX

                        VALUENAME PublicFolderScript

                        VALUEON NUMERIC 1

                        VALUEOFF NUMERIC 0

        END PART

        END POLICY
```

Enable Scripts on User Systems

If you do not wish to use ADM templates to allow scripting across the entire organization, you can direct each user to enable scripts for shared and public folders. Use the following steps to enable scripts in shared and public folders in Outlook 2010:

1. Log into Microsoft Outlook 2010.

2. On the **File** menu, click **Options**.
3. In the Navigation Pane, click **Trust Center**, and then click **Trust Center Settings**.
4. In the Navigation Pane, click **E-mail Security**, and in the **Script in Folders** section, turn on **Allow script in shared folders** and **Allow script in Public Folders**:
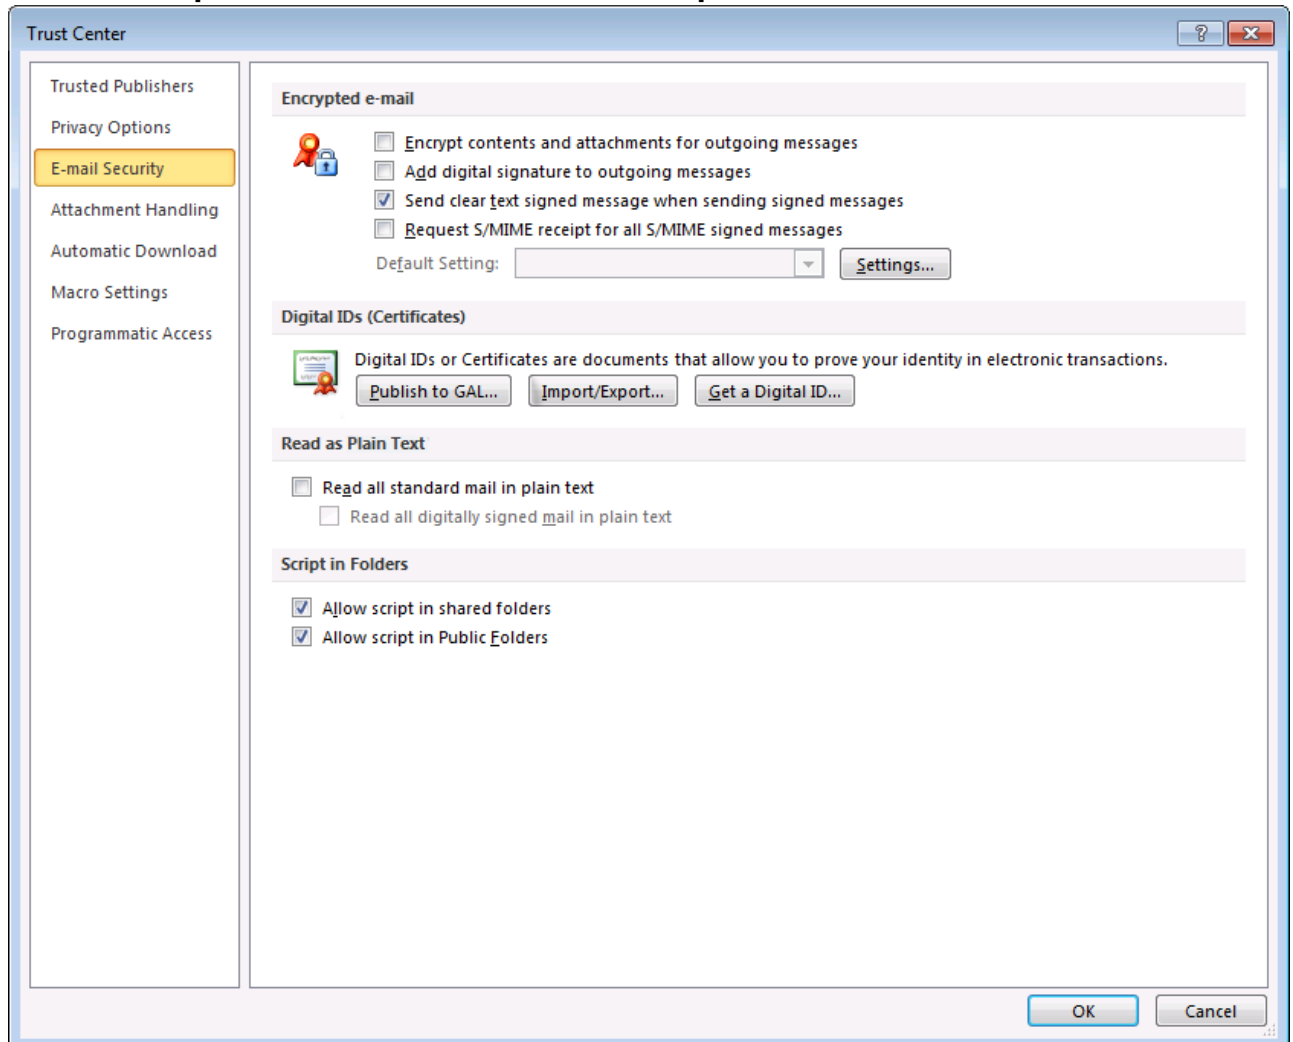

5. Click **OK** to save your settings.
