

## How to Restore a Backup from a Different Barracuda Phone System

<https://campus.barracuda.com/doc/40534507/>

You can restore a backup from a different Barracuda Phone System. To restore a Barracuda Phone System backup to a different Barracuda Phone System, complete the following steps:

1. Verify that the backup file from the source Barracuda Phone System is available on the backup server. For example, with a backup server path of **/home/barracuda** and system serial number of '111111', the backup file would look similar to:  
**/home/barracuda/111111/backups/bps-111111-3.0.007.022--2015-11-11-00-00-24-AST.tgz**
2. On the target Barracuda Phone System, go to the **Configuration > Backup** page, and configure the backup settings with the *same credentials* and path as the source Barracuda Phone System.
3. Click **Apply Settings**, and then click **Test Settings**. You should receive a notification that the test succeeded.
4. After you test the target Barracuda Phone System settings, a new directory appears in the path corresponding to the serial number. If the new serial number is '222222' then the new directory would be:  
**/home/barracuda/222222/backups**
5. Manually copy the backup file to this new directory on the backup server.
6. In the target Barracuda Phone System web interface, click **List Backups** to display the backup file. Click **Restore** to perform the restoration.
