
Amazon Web Services

<https://campus.barracuda.com/doc/41096710/>

Follow instructions below to purchase or get an evaluation of the Barracuda Email Security Gateway on Amazon Web Services. After purchasing or obtaining an evaluation through Amazon, continue with [How to Deploy the Barracuda Email Security Gateway on Amazon Web Services](#).

Before You begin

1. Create an Amazon Web Services account.
2. Create a Virtual Private Cloud (VPC) on Amazon Web Services. See [Creating a VPC, Internet Gateway and Subnet](#).
3. Choose either the BYOL or Hourly/Metered licensing option:
 - Bring Your Own License (BYOL) - This option involves first obtaining a Barracuda Email Security Gateway license token, either by:
 - Providing the required information for a free evaluation at <https://www.barracuda.com/purchase/evaluation> OR
 - Purchasing online at <https://www.barracuda.com/purchase/> . With this license option, there will be no Barracuda Email Security Gateway Software charges, but Amazon Elastic Compute Cloud (Amazon EC2) usage charges on Amazon do apply.

Barracuda offers the same three models for both the Hourly/Metered and BYOL options as shown below. After obtaining your license token, visit the [AWS Marketplace](#) to continue the process.

- Hourly / Metered - In this licensing option, you complete the purchase/evaluation of the Barracuda Email Security Gateway entirely within the [AWS Marketplace](#). Once the instance is launched, it will be provisioned automatically. In this option, you will be charged hourly for both the Barracuda Email Security Gateway Software and Amazon Elastic Compute Cloud (Amazon EC2) usage on Amazon. For pricing information, see the [AWS Marketplace](#). Barracuda offers the same three models for both the Hourly/Metered and BYOL options as shown below.

Barracuda Email Security Gateway Virtual Appliance Instance Types on AWS

The table below lists the available Barracuda Email Security Gateway virtual appliance models, the corresponding Instance Type to be used in Amazon Web Services and the default CPU and Memory for the instance. You'll select the Instance Type in the next step in [How to Deploy the Barracuda Email Security Gateway on Amazon Web Services](#).

Barracuda Email Security Gateway Model	Old Instance Types	New Instance Types
BSF Cloud Edition - Level 3	m1.medium, m3.medium	t2.small
BSF Cloud Edition - Level 4	m1.large, m3.large	t2.medium, t2.large, m4.large, c4.large
BSF Cloud Edition - Level 6	m1.xlarge, m3.xlarge	m4.xlarge, m4.2xlarge, c4.xlarge, c4.2xlarge

If you need to add additional storage space after deployment, due to the Amazon Web Services (AWS) structure, the only current option is to redeploy and restore the configuration on a larger instance.

Next Step

Continue with [How to Deploy the Barracuda Email Security Gateway on Amazon Web Services](#) for instructions on installation and configuration.
