
Mobile Portal

<https://campus.barracuda.com/doc/41097691/>

This article section applies to the Barracuda SSL VPN version 2.5 and above.

The Barracuda SSL VPN mobile portal allows easy access to your organization's applications and network shares for mobile devices such as smartphones or tablets. When accessing the portal via the web browser on a mobile device, users can browse apps, network folders and files as if they were connected to the office network.

The Barracuda SSL VPN mobile interface

The Barracuda SSL VPN mobile portal provides a user friendly interface with a service bar from where users can access available apps and folders, compatible with the mobile device, that are made accessible by the Barracuda SSL VPN. Users can navigate through the network folders and, if necessary, upload and download files.

Additional features

The Barracuda SSL VPN mobile portal lets you set up a mobile portal shortcut on the home screen of your device. Additionally, when accessed from an Apple iOS device, the Barracuda SSL VPN mobile portal lets users with appropriate access rights configure an Exchange (ActiveSync) account and IPsec VPN connections. For more information, see [Custom Device Setup for iOS Devices](#).

If required for administrative tasks, users with the appropriate access rights can switch from the mobile portal to the desktop portal using a direct URL resource shortcut. (This option is recommended for administrators only.) For more information, see [How to Access the Desktop Portal from Mobile Devices](#).

Supported devices

The Barracuda SSL VPN mobile portal supports most of commonly used devices, e.g. Apple iOS, Android and Blackberry. For a complete list of supported devices, see [Supported Mobile Devices](#).
