

## Variables not Synchronized Across Systems in a Mirrored Configuration

<https://campus.barracuda.com/doc/41106274/>

Variables that are not synchronized across a mirrored configuration include:

- GroupWise configuration details
- Any Exchange Integration details (for example, stubbing, folder sync, etc.)
- Serial number (this never changes)
- Administrator password
- Guest password
- Indicator that the latest release notes have been read
- IP Address, Subnet Mask, and Default Gateway (as configured on the **BASIC > IP Configuration** page)
- Primary DNS Server and Secondary DNS Server (as configured on the **BASIC > IP Configuration** page)
- Host Name (as configured on the **BASIC > IP Configuration** page)
- Time Zone (as configured on the **BASIC > Administration** page)
- Web Interface HTTP Port (as configured on the **BASIC > Administration** page); must be the same value on *all* mirrored systems
- Any advanced IP configuration (as configured on the **ADVANCED > Advanced Networking** page)
- All customized branding (models 650 and above, as configured on the on the **ADVANCED > Appearance** page)
- Shared Secret; note that this must be the same on *all* mirrored systems to work properly (as configured on the **ADVANCED > Clustering** page)
- Mirroring Hostname (as configured on the **ADVANCED > Clustering** page)
- Local Host Map (as configured on the **ADVANCED > Clustering** page)
- Web Interface HTTPS/SSL port (as configured on the on the **ADVANCED > Secure Administration** page); must be the same value on *all* mirrored systems
- Any other secure administration configuration, including saved certificates (as configured on the **ADVANCED > Secure Administration** page)
- All SSL information, including saved certificates (as configured on the **ADVANCED > Secure Administration** page)
