

How to Deploy Barracuda Load Balancer ADC Vx Images

https://campus.barracuda.com/doc/41107934/

Barracuda Networks offers the following types of images for the Barracuda Load Balancer ADC Vx deployment. Follow the instructions for your hypervisor to deploy the Barracuda Load Balancer ADC Vx appliance.

Image Type	Supported Hypervisors	
OVF	 VMware ESX and ESXi (vSphere Hypervisor) versions 4.x, 5.x, and 6.x Sun/Oracle VirtualBox and VirtualBox OSE version 3.2 	
VMX	 VMware Server 2.0+ VMWare Fusion 3.0, Player 3.x, and Workstation 6.x 	
XVA	• Citrix XenServer 5.5+	
VHD	 Microsoft Hyper-V 2008 Microsoft Hyper-V 8, 8.1, 2012, 2012 R2, and 10 	

You can download these images from the <u>Barracuda Virtual Appliance Download page</u>. After the download is complete, extract the files from the ZIP folder.

Deploy OVF Images

VMware ESX and ESXi (vSphere Hypervisor) 4.x, 5.x, and 6.x

For VMware ESX and ESXi, follow the steps below to:

- Deploy an Image in VMware ESX and ESXi
- Add Additional Network Interfaces for VMware ESX and ESXi

Deploy an Image in VMware ESX and ESXi

Use the appropriate OVF file for this environment.

- 1. <u>Download</u> and expand the Barracuda Load Balancer ADC Vx ZIP folder.
- 2. Launch vSphere Client and select the appropriate host and resource pool.
- 3. From the **File** menu in the vSphere Client, select **Deploy OVF Template**.
- 4. Click **Browse**. Navigate to the extracted folder, and select the appropriate OVF file for your hypervisor version:

Hypervisor Version	OVF File
ESX and ESXi 4.x	Use the OVF file ending in -4x.ovf .

ESX and ESXi 5.x	Use the OVF file ending in -5x.ovf .
ESX and ESXi 6.x	Use the OVF file ending in -6x.ovf .

- 5. Click **Next**. Verify you selected the correct Barracuda virtual appliance. Click **Next** again.
- 6. Enter a name for the virtual appliance. Click **Next**.
- 7. Select the destination storage for the virtual machine. Click **Next**.
- 8. Select the **Thick Provision Eager Zeroed** disk format to ensure maximum stability when deploying your Barracuda Vx appliance. Click **Next**.
- 9. Map the network to the target network for this virtual appliance. Click **Next**.
- 10. Review the deployment options. Click **Finish** to deploy the virtual appliance.
- 11. Follow the recommendations in <u>Allocating Cores, RAM, and Hard Disk Space for Your Barracuda</u>
 Load Balancer ADC Vx.
- 12. Locate the appliance within the appropriate virtual machine and resource pool. Select it and power it on by clicking the green arrow.
- 13. Click the **Console** tab to monitor the appliance as it is prepared for use.
- 14. Follow the <u>Barracuda Load Balancer ADC Vx Quick Start Guide</u> instructions to set up your virtual appliance.

Add Additional Network Interfaces for VMware ESX and ESXi

- 1. Shutdown the Barracuda virtual appliance using the Console.
- 2. Navigate to the Resource Allocation tab. Under either CPU or Memory, click Edit.
- 3. On the **Hardware** tab, click **Add**.
- 4. Select Ethernet Adapter under device types. Click **Next**.
- 5. On the Network Type window, set the Adapter Type to **VMXNET 3**. Set the Network label to the setting appropriate for your network. Click **Next**.
- 6. Click Finish.Click OK.
- 7. Power On the Barracuda virtual appliance by clicking the green arrow.

Sun/Oracle VirtualBox and VirtualBox OSE 3.2

Use the OVF file ending in **-4x.ovf** for this hypervisor.

- 1. <u>Download</u> and expand the Barracuda Load Balancer ADC Vx ZIP folder.
- 2. From the **File** menu in the VirtualBox client, select **Import Appliance**.
- 3. Navigate to the extracted folder and locate the Barracuda Load Balancer ADC OVF file.
- 4. Select the file and click **Next**.
- 5. On the **Import Settings** screen, follow the recommendations in <u>Allocating Cores, RAM, and Hard Disk Space for Your Barracuda Load Balancer ADC Vx</u>. Click **Finish**.
- 6. Start the appliance.
- 7. Follow the <u>Barracuda Load Balancer ADC Vx Quick Start Guide</u> instructions to set up your virtual appliance.

Deploy VMX Images

VMware Server 2.x

Use the .vmx and .vmdk files for this hypervisor.

- 1. <u>Download</u> and expand the Barracuda Load Balancer ADC Vx ZIP folder.
- 2. Navigate to the extracted folder and move the files ending in .vmx and .vmdk into a folder in your datastore (which you can locate from the **Datastores** list on your server's summary page).
- From the VMware Infrastructure Web Access client's Virtual Machine menu, select Add Virtual Machine to Inventory.
- 4. Navigate to the folder in your datastore used in step 2 and select the file ending in .vmx. Click **OK**.
- 5. Follow the recommendations in <u>Allocating Cores, RAM, and Hard Disk Space for Your Barracuda</u>
 <u>Load Balancer ADC Vx.</u>
- 6. Start the appliance.
- 7. Follow the <u>Barracuda Load Balancer ADC Vx Quick Start Guide</u> instructions to set up your virtual appliance.

VMware Workstation 6.x, Player 3.x, and Fusion 3.x

Use the **.vmx** file for these hypervisors.

- 1. <u>Download</u> and expand the Barracuda Load Balancer ADC Vx ZIP folder.
- 2. From the **File** menu, select **Open a Virtual Machine**.
- 3. Navigate to the extracted folder and select the file ending in .vmx.
- 4. Use the default settings and click **Finish**.
- 5. Follow the recommendations in <u>Allocating Cores, RAM, and Hard Disk Space for Your Barracuda Load Balancer ADC Vx.</u>
- 6. Start the appliance.
- 7. Follow the <u>Barracuda Load Balancer ADC Vx Quick Start Guide</u> instructions to set up your virtual appliance.

Deploy XVA Images

Citrix XEN Server 5.5+

Use the .xva file for this hypervisor. For XEN Server, you first import the virtual appliance template and then create a new virtual appliance based on that template.

Step 1. Import the virtual appliance template:

1. <u>Download</u> and expand the Barracuda Load Balancer ADC Vx ZIP folder.

- 2. From the **File** menu in the XenCenter client, select **Import**.
- 3. Click **Browse**, navigate to the extracted folder, and select the file ending in .xva. Click **Next**.
- 4. Select a server for the template. Click **Next**.
- 5. Select a storage repository for the template. Click **Import**.
- 6. Select a virtual network interface for the template. Click **Next**.
- 7. Review the template settings. Click **Finish** to import the template.

Step 2. Create a new virtual appliance:

- 1. Right-click the virtual appliance template and select **New VM wizard**.
- 2. Select the virtual appliance template. Click **Next**.
- 3. Enter a name for the virtual appliance. Click **Next**.
- 4. For the DVD drive, select **<empty>**. Click **Next**.
- 5. Select a home server. Click **Next**.
- Specify the number of virtual CPUs and memory for the virtual appliance. Follow the recommendations in <u>Allocating Cores, RAM, and Hard Disk Space for Your Barracuda Load</u> Balancer ADC Vx. Click **Next**.
- 7. Select a virtual disk. Click **Next**.
- 8. Select a virtual network interface. Click Next.
- 9. Review the virtual appliance settings. Click **Create Now**.
- 10. When the virtual appliance is ready, right-click it and then click **Start**.
- 11. Follow the <u>Barracuda Load Balancer ADC Vx Quick Start Guide</u> instructions to set up your virtual appliance.

Deploy VHD Images

Microsoft Hyper-V 2008

Use the **.vhd** file for this hypervisor.

- 1. <u>Download</u> and expand the Barracuda Load Balancer ADC Vx ZIP folder.
- Navigate to the extracted folder and verify that the HyperV folder contains the following subfolders:
 - Snapshots
 - Virtual Hard Disks
 - Virtual Machines
- 3. In Hyper-V Manager, right-click the VM host and select **Import Virtual Machine**.
- 4. Navigate to the extracted folder, select the **HyperV** folder, and click **Select Folder**.
- 5. Select Copy the virtual machine and Duplicate all files. Click Import.
- 6. Follow the recommendations in <u>Allocating Cores, RAM, and Hard Disk Space for Your Barracuda</u>
 Load Balancer ADC Vx.
- 7. Start the Barracuda Load Balancer ADC Vx by right-clicking the virtual machine and selecting **Start**.
- 8. Follow the Barracuda Load Balancer ADC Vx Quick Start Guide instructions to set up your virtual

appliance.

Microsoft Hyper-V 8, 8.1, 2012, 2012 R2, and 10

Use the **.vhd** file for this hypervisor.

- 1. Download and expand the Barracuda Load Balancer ADC Vx ZIP folder.
- 2. Launch the *WinServerSetup.bat* file located in the extracted folder. This batch file corrects a compatibility issue and takes less than a minute to run.
- 3. Navigate to the extracted folder and verify that the **HyperV** folder contains the following subfolders:
 - Snapshots
 - Virtual Hard Disks
 - Virtual Machines
- 4. In Hyper-V Manager, right-click the VM host and select **Import Virtual Machine**.
- 5. On the **Before You Begin** page of the **Import Virtual Machine** wizard, click **Next**.
- 6. On the Locate Folder page:
 - 1. Click **Browse**, navigate to the extracted folder, and select the **HyperV** folder. Click **Select Folder**.
 - 2. Click Next.
- 7. On the **Select Virtual Machine** page, click **Next**.
- 8. On the Choose Import Type page, select Copy the virtual machine (created a new unique ID). Click Next.
- 9. On the **Choose Destination: Choose Folders for Virtual Machine Files** page, click **Browse** to search for the location where you want to store the VM files. Click **Next**.
- 10. On the Choose Storage Folders: Choose Folders to Store Virtual Hard Disks page, click Browse to search for the location where you want to store the virtual hard disks for the VM. Click Next.
- 11. For Microsoft Windows 10, you can modify the RAM and Hard Disk space allocations after completing step 12.
 - On the **Configure Memory** page, enter a size for the **Startup RAM** that meets the requirements at <u>Allocating Cores, RAM, and Hard Disk Space for Your Barracuda Load Balancer ADC Vx</u>. Keep the default settings for the other fields. Click **Next.**
- On the Connect Network page, select the network interface that you want to use for management access of the VM. Click Next.
- 13. On the **Summary** page, verify that all the settings are correct. Click **Finish**.
- 14. For Microsoft Windows 10, go to the **Actions** pane and click on **Settings** under **Barracuda Load Balancer ADC**. Under Hardware, ensure that their is enough memory and hard disk space as specified in <u>Allocating Cores</u>, <u>RAM</u>, and <u>Hard Disk Space for Your Barracuda Load Balancer ADC Vx</u>.
- 15. Start your virtual appliance.
- 16. Follow the <u>Barracuda Load Balancer ADC Vx Quick Start Guide</u> instructions to set up your virtual appliance.

To take advantage of Microsoft's VHDX support on Hyper-V 2012, 2012 R2 and 10, follow the

Barracuda Load Balancer ADC

instructions in <u>How to Convert and Replace a Barracuda Virtual Appliance VHD File with a VHDX Format File</u>.
