Common Use Cases

https://campus.barracuda.com/doc/41113599/

How to Check Document Invite Status

A document model returned from the API will have the property: `requests`. It is an array of objects. A `request` object that is fulfilled has the property: `signature_id`. A `request` that is not fulfilled does not have the property `signature_id`.

How to Get List of Documents that the User has been Invited to Sign

Using the list of document objects returned from a `GET /user/documentsv2` call, loop through each document object checking the status of the document invites to find unfulfilled invites.

How to Generate Links to Sign the Documents a User has been Invited to Sign

Please review the Common Use Cases for Fields and Freeform invites for detailed examples.

How to Customize a Signing Link and Embed it in an iframe

Please review the Common Use Cases for Fields and Freeform invites for detailed examples.

How to Download a Document

To download a collapsed document you will need the access_token and the ID of the document to issue a GET request to the /document//download endpoint and set type=collapsed

For example:

```
curl -H 'Authorization: Bearer ACCESS_TOKEN'
https://capi.signnow.com/api/document/2586a3f5fe9a79106015602a5191938bfaf698e
9/download?type=collapsed
```
