
How to Create an Application Filter

<https://campus.barracuda.com/doc/41115747/>

Application filters are objects that are dynamically updated to include applications based on category, risk, or properties selection. Any applications that match the criteria of the application filter are automatically added to the application filter object.

Create an Application Filter

1. Open the **Firewall Rules** page (**Config > Full Config > Virtual Servers > your virtual server > Assigned Services > Firewall**).
2. Click **Lock**.
3. In the left menu, click **Applications**.
4. Create the filter by right-clicking the table and selecting **New > Application Filter** or using the icons in the top-right area of the rule set.
5. Select the categories, risk level, and properties for the applications to be filtered into the object.
6. Click **Save**.
7. Click **Send Changes** and **Activate**.

The following figure displays the process for creating an application filter.

Select the desired category, risk and property entries

Name	Category	Risk	Properties	Info	Depends on
ANts P2P	File Sharing P2P	2	Evasion/Obfuscation, ...	ANts P2P is an anonymous peer-to-peer open so...	IRC, SSL
