
How to Configure Authentication Service Timeouts and Logging

<https://campus.barracuda.com/doc/41116017/>

Configure timeout and logging settings to manage login processes and to log user group information related to your configured authentication schemes.

Configure Timeout and Logging

To configure timeout and logging settings for authentication services:

1. Open the **Authentication Service** page (**Config > Full Config > Box > Infrastructure Services**).
2. In the left navigation pane, select **Timeouts and Logging**.
3. From the **Configuration Mode** menu in the left, select **Switch to Advanced View**.
4. Click **Lock**.
5. Enable **Log Groups** to log user group information.
6. If desired, enable **Log Add. Meta-directory Fields** to log additional meta-directory fields.
7. In the **Timeout Settings**, you can adjust the setting according to your requirements.
8. If required, configure the **Expert Settings**, e.g., **Client Codepage**.
9. Click **Send Changes** and **Activate**.

With timeout and logging settings configured, user group information is logged and the logfiles will be displayed on the Barracuda NG Firewall **Logs** page.
