

How to Configure a Remote Desktop Resource for SSL VPN

<https://campus.barracuda.com/doc/41116139/>

After you configure the SSL VPN service, you can create remote desktop or RDP resources for it.

Note that the RDP applet only supports native Microsoft RDP based remote connections.

Configure a Remote Desktop Resource

1. Open the **SSL-VPN** page (**Config > Full Config > Box > Virtual Servers > your virtual server > Assigned Services > VPN-Service**)
2. In the left menu, click **Application Tunneling**.
3. Click **Lock**.
4. In the **Service Configuration** table, add an entry for each resource. For each entry, you can specify the following settings:

Setting	Description
Name	The name for the resource. For example, RDP
Visible Name	The name that is displayed in the SSL Portal for the resource.
Application Server IP	The IP address. For example, 10.10.10.18

5. Click **OK**.
6. Click **Send Changes** and **Activate**.

You can also create the following types of resources:

- **SSH** - To create an SSH resource, continue with [How to Configure an SSH Resource for SSL VPN](#)
- **Web** - To create a web resource, continue with [How to Configure a Web Resource for SSL VPN](#).
