

Microsoft Azure Deployment

<https://campus.barracuda.com/doc/42046720/>

Barracuda Message Archiver on Azure is no longer available for purchase; Barracuda Message Archiver virtual machines already deployed on Azure will continue to be supported.

Virtual machines (VMs) deployed through Azure Gallery prior to mid February, 2015 do not support Disk Expansion. If you deployed prior to this time period and want to expand the disk, you must re-deploy the VM using the latest VM image available in [Azure Gallery](#).

Microsoft Azure is a public cloud service, with instances that use one virtual network interface with a dynamic IP address per virtual appliance. The Barracuda Message Archiver provides affordable email archiving designed for optimal email storage, regulatory compliance and e-discovery through Microsoft Azure.

- **Web Interface** - [Web interface configuration](#).
- **Archived Data Backup** - Now that you are storing data, you need to back up the Barracuda Message Archiver data. You can back up your raw email data as well as data directories that house statistics, index, and other metadata snapshots the Barracuda Message Archiver generates. For details, see [How to Back Up Archives](#).
- **Deployment** - Mail archival configuration is based on the Email Servers in your environment. Once you set up your Barracuda Message Archiver, determine the deployment that best suits your environment from the available [deployment options](#).

Add Additional Storage to an Existing Deployment
