

Creating a Custom Service

<https://campus.barracuda.com/doc/4259885/>

A custom service allows the Barracuda Web Application Firewall to process any application layer protocol over TCP. Data sent by the client to a custom service is forwarded to the back-end servers without analysis. The Barracuda Web Application Firewall does not validate the incoming requests or outgoing responses. To create a custom service, select **Custom** as the type of service. For additional instructions go to the **BASIC > Services** page and click **Help**.
