

System Health Node

<https://campus.barracuda.com/doc/43222675/>

ArchiveOne regularly checks various aspects of the system to ensure it is running smoothly by running a set of tests. You can configure when this happens and what sort of notifications are generated. The tests are run at a scheduled time (by default daily at 6am). To run these tests immediately, right-click **System Health**, and then click **Run Now**. When a set of tests is complete, a summary of the results of the run is shown in the right pane including the number of tests that succeeded, failed, or reported a warning. Double-click the results row to view details for the selected test.

You can right-click on a report and choose to view, save or delete it. To send a System Health report to [Support](#) for analysis, use the **Save** option.

Right-click **System Health**, and then click **Configure** to configure the following characteristics:

- The schedule on which to run the set of tests; typically run daily or weekly.
- A list of tests to exclude from the results.
- Whether to download new tests as they become available. It is generally recommended that you enable this feature.
- Configure email notifications:
 - Whenever a set of tests is run. This is the default setting.
 - Only if one or more of the tests does not complete successfully.
 - Disable sending notifications.
- If email sending is enabled, you must configure the email address to use and the SMTP host (typically the name of an Exchange server – one with the Hub role if running Exchange 2007 or 2010, or any server if earlier – but can also be an external server such as Google Mail). If required, click **Advanced** to set the SMTP port and authentication details. Once configured, click **Test Email** to attempt to deliver a test mail using the configured details.
