

How to Configure SQL Server

<https://campus.barracuda.com/doc/43222763/>

Configuration data (not archive data) is stored in SQL Server.

- If you are running SQL Server Express on the same server as the ArchiveOne Service, such as the one installed with Advanced Auditing, no further configuration is required.
- If you are running SQL Server Express on another server, you can set the necessary permissions by making the ArchiveOne service account, such as **mydomain\ArchiveOneAdmin**, a member of the machine's Administrators group.
- If you are running SQL Server, or SQL Server Express but you do not want to change the Administrators group, you must also install Microsoft SQL Server Manager Studio.

To complete configuration:

1. Run Microsoft SQL Server Manager Studio.
2. Click **Security/Logins**.
3. Right-click and select **New Login**.
4. Enter the name of the ArchiveOne service account, for example, **mydomain\ArchiveOneAdmin**.
5. Select **Server roles**.
6. Select the **dbcreator** role.
7. Close **Microsoft SQL Server Manager Studio**.

You must also ensure that the SQL Server TCP/IP protocol is enabled. To do so:

1. Run **SQL Server Configuration Manager**.
2. Expand **SQL Server Network configuration**, select **Protocols for MSSQLSERVER** or the specific instance that you will be using, if necessary, right-click **TCP/IP**, and click **Enable**.
3. Close **SQL Server Configuration Manager**.

Additionally, if you intend to use the Information Manager website, the SQL Server or SQL Server Express instance must have the Full-Text Search feature enabled.
