

Search URL Page

<https://campus.barracuda.com/doc/43222832/>

Use the **Search URL** page to specify the server name to be used for the [Search and Retrieval Website](#):

The screenshot shows a dialog box titled "Search URL" with a close button (X) in the top right corner. The text inside the dialog reads: "Archive One Policy Manager must know the server name to use for the archive search website URL, which can be installed on the same server as the Archive One Policy Manager service, but should be on your OWA front-end server if you have one. Once you have archived some data, this server name cannot be changed. The suggested server name is 'Oliver2008.scutter2000.c2c2000.com' This would make the URL 'http://Oliver2008.scutter2000.c2c2000.com/AOneSearch' However, you are recommended to create a new DNS entry for the server and use that instead. See the help for more information." Below the text is a text input field labeled "Server:" containing the text "WebServer". Underneath the input field is a checkbox labeled "Use SSL for connection to the archive search website" which is currently unchecked. At the bottom of the dialog are four buttons: "< Back", "Next >", "Cancel", and "Help".

The **Server** field displays a suggested value for the server, however, consider carefully whether the suggested value is appropriate for your installation.

If you access the Search and Retrieval Website internally using an external name, specifically, a name which has dots in it, then you may need to add this site to your **Trusted sites** list in Internet Explorer to avoid an authentication request. This can be done centrally using a Group Policy.

Turn on **Use SSL** if you require an SSL connection to your Search and Retrieval Website.
