

Server Data Location Page

<https://campus.barracuda.com/doc/43222846/>

Use the **Server Data Location** page to specify the storage location for various temporary files on the ArchiveOne Server:

The screenshot shows a Windows-style dialog box titled "Server Data Location". It contains the following text: "Select the directory on the Archive One Policy Manager Service server where temporary data is stored. A change to this directory only takes effect when the Archive One Policy Manager Service is restarted. We recommend a minimum of 10Gb free disk space for this location." Below this is a label "Directory for the temporary data:" followed by a text input field containing "C:\ArchiveData\ServerData" and a "Browse" button. Further down, it says: "This option changes the location for storage of PSTs created during policies with copying actions, intermediate data created by PST processing, and other short life data." and "For this reason, you should not change this value if any PST policies are currently being processed." At the bottom are four buttons: "< Back", "Next >", "Cancel", and "Help".

This option changes the location for PST storage created during policies with copying actions, intermediate data created by PST processing, and other short life data. For this reason, do not change this value if any PST policies are currently processing.
