

## Archive Location Page - No Storage Manager

<https://campus.barracuda.com/doc/43222942/>

The **Archive Location** page displays in the **Configuration Wizard** if you are *not* using a third-party **Installing a Storage Manager**. Use this page to configure the Archive Base Directory. This can be changed after archiving is complete, however, you must move all files and directories under the original Archive Base Directory to the new Archive Base Directory to avoid corrupting the archive:

The screenshot shows a window titled "Archive location" with a close button in the top right corner. The main text reads: "Archive One Policy Manager without a storage manager uses a directory for storing archive files. Select where on the Archive One Policy Manager Service server these files should be stored." Below this, it says: "Archive Base Directory for storing archive files (this will grow with the size of your archive):". A text input field contains the path "C:\ArchiveData\Repository1\Archive" and a "Browse" button is to its right. A note below the input field states: "If you use a drive letter in this path, it must be a physical drive (not a mapped drive) on the Archive One Policy Manager Service server, or you can use a UNC to any location." At the bottom of the window, there are four buttons: "< Back", "Next >", "Cancel", and "Help".

## Figures
