

Archive Page - With Storage Manager

<https://campus.barracuda.com/doc/43222945/>

The **Archive** page displays in the Configuration Wizard if you are using a [Installing a Storage Manager](#):

The screenshot shows a Windows-style dialog box titled "Archive". The text inside reads: "Configure here the details of the storage system (eg optical library) accessed through your third party storage manager." Below this, there are three main sections:

- The path to your QStar Integral Volume:** A text box contains the path "\\QStarServer\IntegralVolume1" and a "Browse" button is to its right.
- Cache directory location on the Archive One Policy Manager Service server:** A text box contains the path "C:\ArchiveData\Repository1\Cache" and a "Browse" button is to its right.
- Maximum cache size in Mb:** A text box contains the value "1000".

At the bottom of the dialog, there are four buttons: "< Back", "Next >", "Cancel", and "Help".

You can configure the following from this page:

- If you are using *CA BrightStor ARCserve Backup*, specify the storage device group name.
- If you are using *HP OpenView Storage Data Protector*, specify the storage device name.
- If you are using *QStar*, specify the path to your Integral Volume.
- If you are using *PoINT* (PowerFile or other hardware), specify the path to your PoINT system's repository drive; you must include the name of the volume set in the location path, for example: **I:\archive06**.
- If you are using *BridgeHead HT Data Repository*, specify the HT Data Repository name; not the ArchiveOne Repository name.
- If you are using a drive-mapped storage manager, specify the storage manager drive or UNC path, for example, **\\mystorage\share**.
- If you are using a storage manager provided by a *Storage Controller Module*, click **Configure** to configure the storage manager – consult the documentation provided with the Storage Controller Module for details of how to configure the storage manager.
- Archive cache directory in which to store files retrieved from storage.
- Archive cache size.
- If you are using *EMC2 Centera*, specify the following details:
 - Specify DNS names or IP addresses of the Centera access nodes to which to connect.

- Test access nodes.
- The Specify the Pool Entry authorization file location on the ArchiveOne Service server. Note that this file is supplied by the Centera Administrator if your Centera requires an access profile.
- Specify the Archive Cache Directory and Archive Cache Size.
