

Rate Control Page

<https://campus.barracuda.com/doc/43222947/>

Use the **Rate Control** page to configure the archiving rate:

The screenshot shows a Windows-style dialog box titled "Rate control". Inside the dialog, there is a checkbox labeled "Control archiving rate:". Below this checkbox is a text description: "Maximum quantity of data to archive in any policy run, in Mb. This can be used to prevent overloading the storage manager at busy processing times." To the right of this text is a text input field containing the number "5000". At the bottom of the dialog, there are four buttons: "< Back", "Next >", "Cancel", and "Help".

Rate control allows you to limit the amount of data processed by ArchiveOne, in order to prevent your Exchange server from being overrun at busy time – for instance, to prevent the transaction logs filling up. Once the specified amount of data is archived, the archiving policy stops. Note that these are repository-specific settings and managing rate control in one repository does not prevent another repository causing Exchange server problems.
