

Temporary Data Page

<https://campus.barracuda.com/doc/43222955/>

Use the **Temporary Data** page to specify where on a local hard drive you want to store temporary data generated and cleared each time the repository is updated. Allow at least 3Gb of space for temporary data. This defaults to a subdirectory of the Index Base Directory which is sufficient unless your index is stored on a remote system since the archiving process is fastest if the temporary data location is on a fast connected store.
