How to Run a Federated Search

https://campus.barracuda.com/doc/43223027/

ArchiveOne supports federated search – any system that supports the OpenSearch protocol, such as Microsoft Search Server 2008, can be used to search the ArchiveOne archive. For example, the URL format required to run a search for the word **TEST**, where *servername* is the name of the system running the Search and Retrieval Website, is:
http://*servername*/AOneSearch/OpenSearch.aspx?q=TEST

Or you can use: **http://*servername*/AOneSearch/OpenSearch.aspx?q=TEST&f=xml**

Where the format **f=** can be **xml** or **htm**; the default is **htm**.

The required permissions are the same as those required to run a basic search with the Search and Retrieval Website.
