

Working with Certificate Services

<https://campus.barracuda.com/doc/43843652/>

This is only applicable for backing up a server that has certificate services installed, e.g., Certificate Authority installed on Windows.

You can override the backup modes that jobs specify for backing up certificate services.

- **Force modes** – Set the modes to use when a job specifies **Full**, **Differential**, and **Incremental** modes. For example, if you specify Full for the **Incremental** mode, Yosemite Server Backup runs a full backup even though a backup job specifies an incremental mode.
