

Restore a Hyper-V Backup

<https://campus.barracuda.com/doc/44434594/>

You can watch a short video about restoring a Hyper-V backup.

You cannot restore individual files from backups using the Hyper-V agent; you can only restore an entire guest machine.

1. Launch the Yosemite Server **Administrator** and log in to the backup domain.
2. On the **Tasks** page, double-click **Restore**.
3. In the **New Restore Job** dialog box, provide a name for the restore job.
4. On the **Properties** page of the restore job, click **Selection**,
5. On the **Selection** page, expand the master server and select the Hyper-V virtual machine icon.
6. Select the Hyper-V host.
7. Select the Hyper-V guests that you want to restore.
8. In the navigation bar, click **Device** and select the device that contains the backup of your Hyper-V guest.
9. Optionally, select **Objects to log** to **Failed and not attempted** in order to view everything excluded from the restore job.
10. Click **Apply** and then **OK**.
11. At the dialog box prompt, select **Yes** to go to the home folder.
12. To run the restore, right-click the restore job, select **Run** and confirm your choice.
13. In the navigation bar, click **Status** to view a summary of the restore job.
14. Click **OK**.
15. From **Status and Logs**, select the restore job to confirm that the restore jobs completed successfully.
16. In the Hyper-V manager, stop the service and restart it,
17. Start the machine and connect to it.
