

How to add Additional Storage to your Azure Deployment

<https://campus.barracuda.com/doc/45023432/>

Virtual machines (VMs) deployed through Azure Gallery prior to mid February, 2015 do not support Disk Expansion. If you deployed prior to this time period and want to expand the disk, you must re-deploy the VM using the latest VM image available in Azure Gallery.

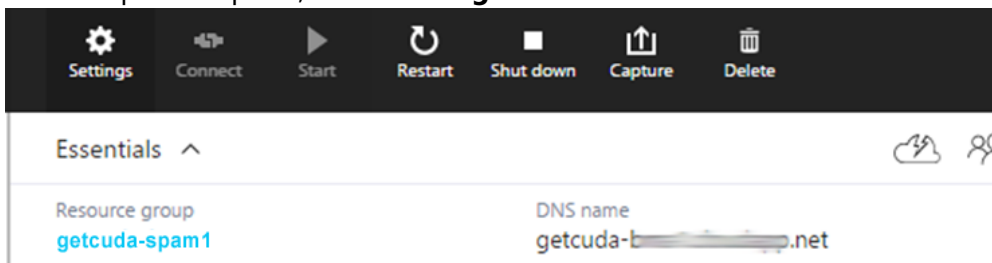

1. Log in to the [Microsoft Azure Portal](#).
2. Click **Browse**, and then click **Virtual Machines**:

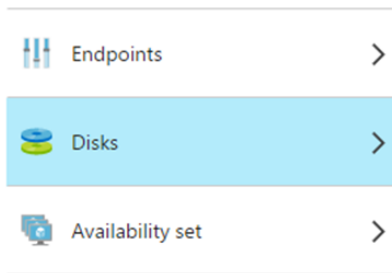

3. Click on the Instance where you want to increase storage:

NAME	STATUS	LOCATION
 getcuda-ao1	Running	East US 2
 getcuda-spam1	Running	East US 2
 getcuda-client1	Running	East US 2

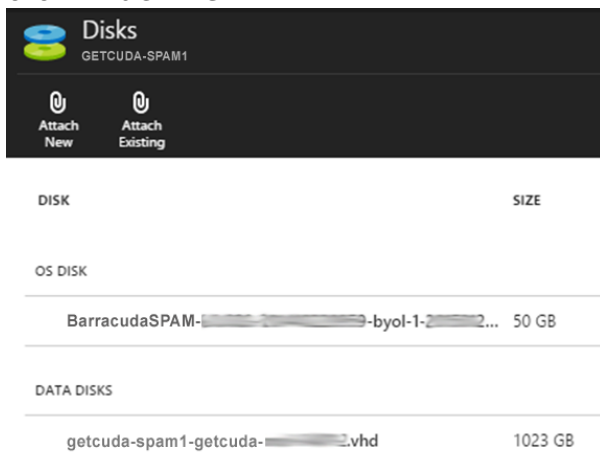

4. At the top of the pane, click **Settings**:

5. Click **Disks**:

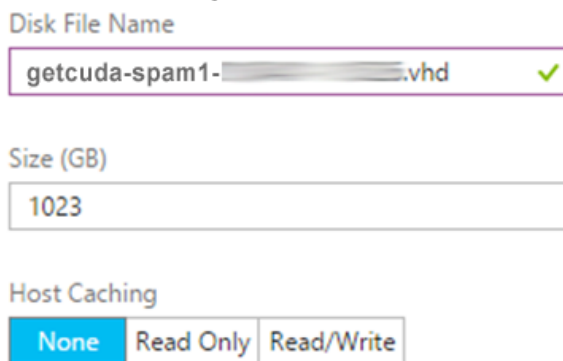

6. click **Attach New**:

7. Enter the disk size as per your requirement.

8. Set **Host Caching** to **None**:

9. Click **OK**:

STORAGE CONTAINER
vhds >

Disk File Name
 ✓

Size (GB)

Host Caching
 None Read Only Read/Write

10. Once the task is complete, go to **Settings** of the selected Instance, and then click **Restart:**

During the reboot process, the Barracuda VM provisions the additional storage. This can take some time depending on the region where your virtual machine is located and the amount of provisioned storage.
