

How to Resolve "A Volume (drive) that was previously backed up is no longer there and being backed up" Warning

<https://campus.barracuda.com/doc/45025119/>

This article describes how to resolve the error "A Volume (drive) that was previously backed up is no longer there and being backed up", as shown in the following image:

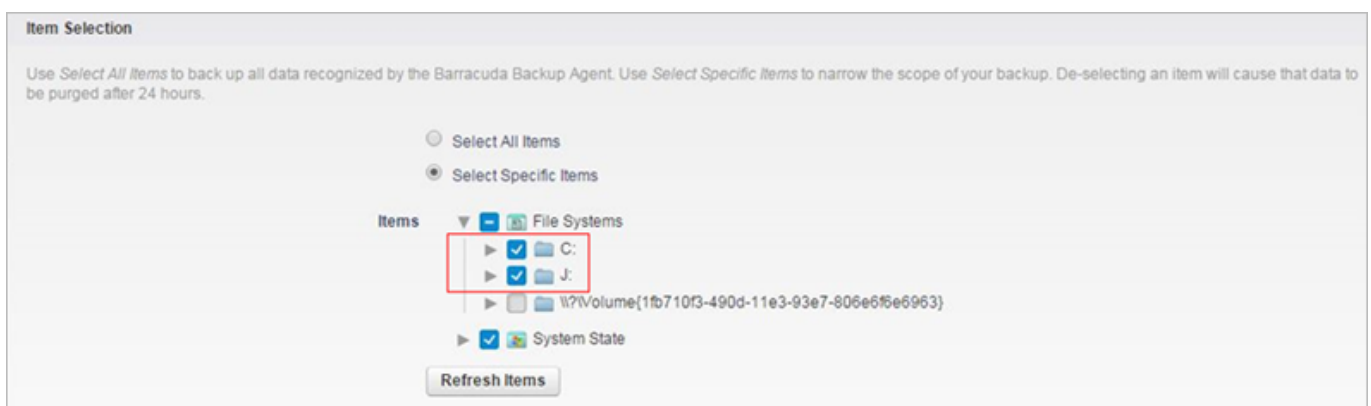

The most common cause of this error is a selected drive missing when a backup runs. To resolve this issue, bring the missing drive back online. Once the drive is online, the error clears upon the next backup.

If you remove a drive from the backup selection list, all historic data for that drive is removed within 48 hours.

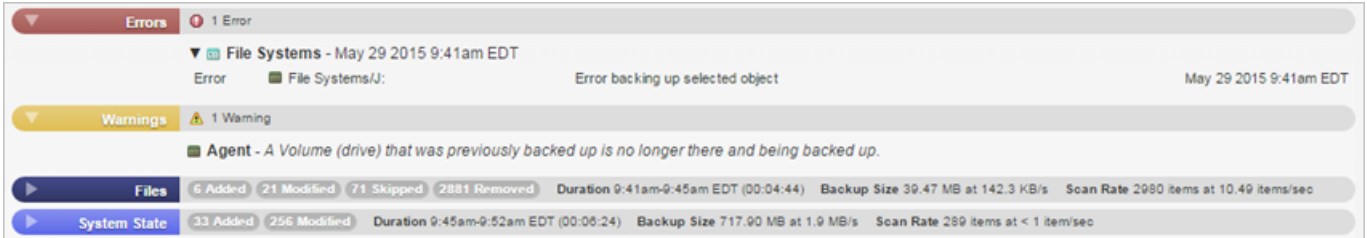

Example Scenario

For example, you add a data source and select to back up drives **C** and **J** on the **Backup > Sources** page:

After a few successful backups, the **J** drive goes offline and the next backup report displays the

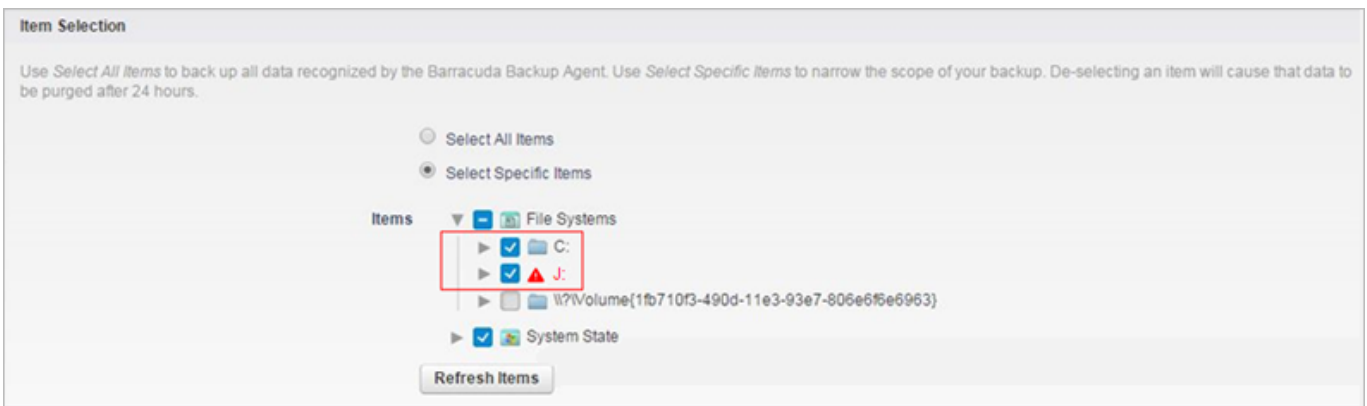

warning message:

The screenshot shows the Barracuda Backup interface with the following details:

- Errors:** 1 Error. File Systems - May 29 2015 9:41am EDT. Error: File Systems/J: Error backing up selected object. May 29 2015 9:41am EDT.
- Warnings:** 1 Warning. Agent - A Volume (drive) that was previously backed up is no longer there and being backed up.
- Files:** 6 Added, 21 Modified, 71 Skipped, 2881 Removed. Duration: 9:41am-9:45am EDT (00:04:44). Backup Size: 39.47 MB at 142.3 KB/s. Scan Rate: 2980 items at 10.49 items/sec.
- System State:** 33 Added, 256 Modified. Duration: 9:45am-9:52am EDT (00:06:24). Backup Size: 717.90 MB at 1.9 MB/s. Scan Rate: 289 items at < 1 item/sec.

Go to the **Backup > Sources** page and view the data source; the drive **J** is missing:

The screenshot shows the "Item Selection" page with the following details:

- Instructions: Use *Select All Items* to back up all data recognized by the Barracuda Backup Agent. Use *Select Specific Items* to narrow the scope of your backup. De-selecting an item will cause that data to be purged after 24 hours.
- Options: Select All Items, Select Specific Items.
- Items list:
 - File Systems
 - C: (checked)
 - J: (checked, highlighted with a red box)
 - W?Volume{1fb710f3-490d-11e3-93e7-806e6f6e6963}
 - System State (checked)
- Refresh Items button.

Bring the missing drive back online to resolve the error once the next backup is run.
