
How to Install the Search and Retrieval Website on a Different Server

<https://campus.barracuda.com/doc/45712464/>

Use the following steps to install only the Search and Retrieval website component on another server:

ArchiveOne Version 7.3 and Higher

To install the Search & Retrieval Websites component only:

1. Right-click the **ArchiveOne Setup Enterprise.version.exe** and select **Run as administrator**.
2. The ArchiveOne package will now automatically extract the necessary files and launch the installer.
3. On the **Introduction** step review the license agreement, tick '**Accept License Agreement**' and **Next** to proceed.
4. On the **Select Features** step select the **Search and Retrieval Websites** and click **Next** to proceed.
 1. Modify the installation directory if desired by clicking **Browse**. The default directory is **C:\Program Files (x86)\Barracuda\ArchiveOne**.
5. You will be prompted for the name of the Archive server (the server where you installed the Core Service component) and click **Next**. You can enter either the hostname or the fully qualified domain name (FQDN).
6. The installer will attempt to connect to the configuration data on the named server. If this succeeds, the **Install Summary** will now display with the configuration options you have selected. Click **Install** to start the installation process.
 1. If this fails, you will be presented with a message with further details on how to correct the error.
7. The status of the installation process will display whilst the various steps are being completed. Once the installation has successfully completed, review any outstanding actions (if reported) and click **Finished** to close the installer.
 1. Click **Save Logs** if you wish to save a zipped copy of the installation logs.

ArchiveOne Version 7.2 and Earlier

1. On the server where you want to install the Search and Retrieval website, right-click **Archive One Policy Unicode Setup version.exe** and click **Run as administrator**.
2. The installer launches. In the **Welcome** page, click **Next**.
3. On the **License Agreement** page, select I **agree**, and click **Next**.
4. On the **Customer Information** page, enter a **User Name** and **Organization** as appropriate,

and click **Next**.

5. On the **Custom Setup** page, from the **ArchiveOne X** drop-down menu, select **This feature will not be available**.
6. From the **Search and Retrieval website component** drop-down menu, select **This feature will be installed on the local hard drive**. By default this component is installed in the **C:\inetpub\wwwroot** directory. If necessary, click **Change** to modify the installation directory. Click **Next**.
7. On the **Configuration Server Name** page, enter the server which hosts the configuration data in the Add-ins shared folder. If you do not know the Configuration server name, this can be found by selecting the [Status Node](#) in the ArchiveOne admin console. The Configuration server name is listed in the right pane. Enter the Configuration server hostname; the Fully Qualified Domain Name (FQDN) is not required. Click **Next**.
8. The ArchiveOne Deployment Analyzer automatically runs. If any warnings or errors are detected, click **View Detailed Results** to review the report. You must correct warnings and errors before proceeding. If all tests succeed, click **OK** to continue.
9. On the **Ready to Install the Program** page, click **Install** to begin the installation.
10. Once the installation is complete, click **Finish** to close the installer.
11. Update the ArchiveOne configuration to use the websites installed on the separate server.
