How to Manually Update Repository Size

https://campus.barracuda.com/doc/45712483/

This article refers to the Barracuda ArchiveOne versions 5.8 and higher.

Use the following steps to update the repository metrics:

1. On the configuration server, browse to ***Configuration_Server*\Add-ins\AOnePol\Repositories** where *Configuration_Server* is the name of the configuration server.
2. Browse to the subfolder named for the repository you want to modify, for example, **Year_2014**.
3. Open the file that includes the repository name in Notepad, for example, **year_2014.c2c**
4. Locate the values **Indexsize=*XXXX*** and **Size=*XXXX***

   Indexsize is the size of the Index directory in bytes, and **Size** is the size of the Archived Data directory in bytes. You can check the size of the directories on disk in Explorer. If you do not know where the Archive data and Index folders are located on disk, locate the values **DirForArchives=*XXXX*** and **DirForIndex=*XXXX***.
5. Edit these values to correspond to the data size on disk.
6. Save and close the file.
7. Because repository configuration files are read only during startup, if the ArchiveOne Admin console is open, close and relaunch it.
8. The new values should not display in the repository metrics.
