How to Increase the XML Transformation Size Limit

https://campus.barracuda.com/doc/46206312/

By default, there is a 10MB limit on the transformation of the XML results file to ensure the report is rendered in a timely fashion in your web browser. Transformations on results files over the 10MB limit take longer and may cause your web browser to appear to hang, therefore, when you run a policy which produces a large number of results, the Policy results report displays only a summary of matching data. When the XML file is less than 10MB, a full list of messages is displayed in the report. You can modify the transformation limit so that all matching messages are listed in full in the report.

> The procedure described in this article involves editing the Windows machine registry. Using the Registry Editor incorrectly can cause serious, system-wide problems that may require reinstallation of Windows. Barracuda cannot guarantee that any problems resulting from the use of Registry Editor can be solved. Use this tool at your own risk. It is highly recommended that you create a backup of the registry before making any changes.

To modify the maximum size limit,

1. On the Archive server, type `services.msc` in the **Start Search** box, and press **Enter** .
2. In the **Services** window, right-click **ArchiveOne Service**, and click **Stop**.
3. Run `regedit` to open the Registry Editor.
4. Browse to the following location: **HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\AOnePolService\Parameters**
5. Create a new **DWORD** called **XMLFileSizeLimit** . The value of this key is the size limit in bytes for generating reports. By default the value is **10485760** (10MB). Increment the value as required.
6. Close the Registry Editor.
7. Open the Microsoft Services console (**services.msc**) and restart **ArchiveOne Service**.

The report generates in full up to the new maximum file limit.
