How to Schedule a Policy to Start through a Script

https://campus.barracuda.com/doc/46206334/

You can start a policy using a script. For example, after a backup has been completed and the backup software allows for starting a script upon completion.

> Some older versions of ArchiveOne may not have the required .**dll** file in the correct location to allow the VBS to process correctly.

1. On the Archive server, browse to the **SDK** folder in the installation directory, by default: **C:\Program Files (x86)\C2C Systems\ArchiveOne**
2. If the **NLog.dll** file is not present, copy the file from **C:\Program Files (x86)\C2C Systems\ArchiveOne\WebSupport** into the folder **C:\Program Files (x86)\C2C Systems\ArchiveOne\SDK**
3. Create a new text file and rename it **MyScript.vbs**.
4. Open the .**vbs** file in Notepad, and add the following lines to the contents:
   Dim polman
   Set polman=CreateObject("C2CSystems.ArchiveOne.Policy.PolicyManager")
   polman.StartPolicy("<*mypolicyname*>")
   where **<*mypolicyname*>** is the name of the Policy you wish to run.
   > Enclose the policy name in double quotation (" ") marks.
5. Save and close the file.
6. To run the script, open a command prompt and type:
   `C:\Windows\SysWOW64\CScript <FolderPath\script.vbs>`
   where *<FolderPath\script.vbs>* is the location and name of the VBS script you have created, e.g. `C:\MyScripts\ScheduledPolicy.vbs`
   > On a 64-bit operating system, the script needs to be run in 32-bit mode.
7. To verify the script has successfully started the specified policy, open the ArchiveOne Admin console.
8. Right click the **Policy** node, and click **View Status**. Verify the policy status displays as **running**.

If the test is successful, you can schedule the VBS file to run via Task Scheduler or through your backup software.
