

How to Output Messages to a PST File

<https://campus.barracuda.com/doc/46206428/>

This article refers to the Barracuda ArchiveOne Enterprise and Express version 5.8 and higher.

You can retrieve messages from the archive to a PST to distribute to another user or third-party by running an archive search from the ArchiveOne Admin console.

To retrieve search results to a PST file,

1. Open the ArchiveOne Admin Console, and click the **Archive Searches** node.
2. Right-click the search you wish to run, and click **Run**.
If necessary, create a new search.
3. Once the search is complete, click **View summary**, and click **OK** to view the search results.
4. Right-click in the **Search Results** pane, and click **Change Retrieval Location**.
5. Select **Pub results into a PST**, and enter a name for the PST file.

Note the location where the PST file is to be generated, for example:

\\SERVERNAME\AOnePol_PST_for_retrievals

6. Click **OK** to save the configuration.
7. Select and right-click the messages for retrieval, and click **Retrieve Message**.

The messages are retrieved to the named PST file in the **AOnePol_PST_for_retrievals** shared folder.
