

How to Uninstall the Barracuda NAC/VPN Client for Windows

https://campus.barracuda.com/doc/46206832/

To remove the Barracuda Network Access Client for Windows and all of its components from a system, use the Barracuda Network Access Client InstallShield Wizard or uninstall the application using the *Uninstall a Program* feature of the Windows Control Panel. After the uninstallation process, you may be prompted to restart the system.

Do not run the installation executable from a network share. Instead, copy the installation files to a local hard drive and run it from there. Otherwise, the uninstallation will fail because all network connections are terminated for a few moments during the installation process.

Before You Begin

During the uninstallation process, all network connections will be interrupted for five seconds or longer. Before uninstalling Barracuda Network Access Client:

- Close any applications that may become unstable and save any open documents on network shares.
- Close all components of the Barracuda Network Access Client.

Uninstalling the Client with the Setup Wizard

- 1. Double-click the *setup.exe* file for the Barracuda Network Access Client. The InstallShield Wizard then starts to prepare the installation files.
- 2. After the installation files are prepared, the InstallShield Wizard starts the setup process. Click **Next** to continue.
