Understanding the Unarchive Process

https://campus.barracuda.com/doc/46208596/

- Unarchiving can only be performed against an entire, specific mailbox or a named folder in a specific mailbox.
- Unarchiving activity only occurs in the first phase; there is no activity in the second phase.
- Messages are unarchived to the message stub location; for example, if you have moved a stub from the **Inbox** to a new folder named **Important**, unarchived messages are placed in the **Important** folder.
- If a message stub is deleted, the message cannot be unarchived.
- You cannot unarchive mesages back into a PST file.
- The unarchive process does not unarchive messages back into a PST; for example, if you have archived a PST file and have not finalized the PST, the messages are not unarchived.
- Unarchiving does not delete the archived data in the repository; a copy of the message is written back to the user's mailbox and the archived item remains in the repository. Therefore, you can still run archive searches from the ArchiveOne Admin console for this data.
- Rate control has no affect on the unarchive process.
